

The Reserve + is a medium-firm mattress that features foam layers specially designed to conform to the weight and pressure of every individual. Its cover is soft to the touch and exceptionally breathable. The foam layers are designed for maximum air circulation and temperature regulation to keep the sleeper cool and supported through the night.

Double Jacquard Fabric Cover

This cover not only breathes, but the air flow creates a cooling sensation keeping you comfortable while you sleep. This highly advanced fabric stays cool-to-the-touch due to its superior breathability and temperature regulating properties that move heat away from the body.

Gel AeroFusion Memory Foam

This material takes memory foam to the next level. Micro-channels optimize airflow and temperature regulation to ensure you stay cool while still getting the comfort and pressure-relieving benefits memory foam is famous for. In addition, it offers supportive spinal alignment while maintaining a plush feel. This foam was previously labeled as AirCell Foam.

Liquid Gel Flex Foam

This cooling foam is the third in our line of Flex Foams. It is a more breathable version of our Flex Comfort Foam with liquid cooling gel swirled into the foam's cellular-like structure. This keeps the sleeper cooler and allows more air to circulate through the foam layers.

Flex Support Foam

Flex Support Foam is often the bottom layer of our mattresses. A mattress must provide the necessary support to keep the spine aligned so the sleeper's muscles relax instead of tightening to compensate. This high-grade foam completes the bottom of the mattress to provide long-lasting durability and support for the top layers.
