### **INSTALLATION CLEARANCES:**

**ELECTRICAL & GAS CLEARANCES:** 

HOOD

100

ELECTRICAL LINE A properly-grounded horizontally- mounted electrical receptacle should be installed

#### GAS LINE

An agency-approved, properly-sized manual shut-off valve should be installed. To connect gas between shut-off valve and regulator, use agency-approved, properly sized flexible or rigid pipe.

Always check all local code requirements.

The below dimensions denote the location of the gas inlet and electrical junction box/receptacle. These are the recommended locations. For replacement purposes, the location of the existing utilities may be used provided they do not interfere with the side or rear of the range. Always check local building codes for permissible gas valve locations.
