

RELIABLE POWER HANDLING

New to the KTA-200M, a voltage adapting input circuit is included to maintain the maximum source signal level without clipping. This ensures that the KTA-200M can continue to produce powerful, clean bass even at higher volumes with dynamic musical passages.

POWERSTACK CAPABLE

The KTA-200M utilizes Alpine's compact Power Pack design to fit in hidden areas like a glove box or behind a radio to optimize power and space in your vehicle. Mounted behind the iLX-W650 7-Inch Mech-Less Audio/Video Receiver, the KTA-200M becomes the newest PowerStack product, for an easy, hideaway bass solution that adds more power to the sound system while occupying the same depth as a traditional 2-DIN radio.

REMOTE BASS KNOB READY

The KTA-200M has input capability to add an optional RUX-KNOB.2 Remote Bass Control Knob (sold separately). The remote bass knob controls the bass in your subwoofer by adjusting the gain on your amplifier for quick bass adjustments when needed.
