

CLTI-2DIM2

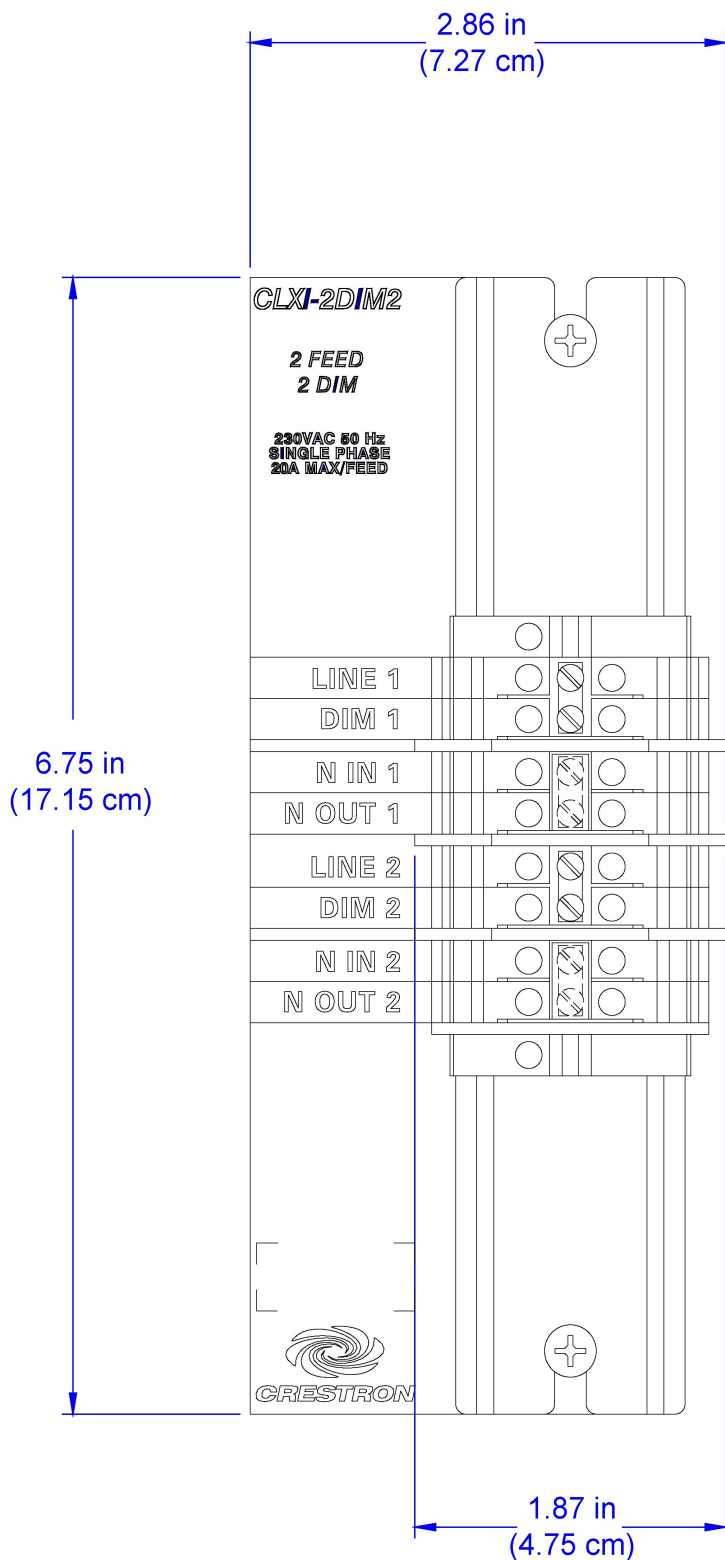

Terminal Block for CLXI-2DIM2

The CLTI terminal blocks are designed to install in **CAEN** and **CAENIB** automation enclosures to facilitate the termination of high-voltage wiring for each CLXI-Series lighting control module. The color-coded DIN rail design, complete with printed label strips and mounting hardware, provides for a clean and simple installation. Electrical bypass jumpers on each terminal facilitate testing of each circuit and protect the module during installation. Each CLT terminal block assembly weighs approximately 0.5 lb (0.23 kg).
