

Experience the elegance and innovation of the Theodore Grandfather Clock – a timeless masterpiece that seamlessly blends classic charm with modern functionality. Crafted with precision and attention to detail, this black iron grandfather clock features captivating moving gears that add a mesmerizing touch to any space. Finished in aged silver, the head assembly and gears exude sophistication, while wood accent panels in a graphite gray finish add warmth and character.

Designed for both aesthetic appeal and practicality, the gears rotate clockwise and counterclockwise with the turn of the hand wheel, offering a fascinating visual experience. The base boasts a wood shelf finished in graphite gray, providing a perfect platform for displaying cherished items.

Adorning the dial are pierced, motorized moving Roman numerals and hour markers, complemented by hour and minute hands and gears finished in aged silver. The unique pendulum bob, reminiscent of the verge on a mechanical clock movement, adds a distinctive touch finished in black iron.

Enjoy enhanced visibility with the convex glass dial, backlit with LED lighting diffused through a translucent lens, creating a soft, ambient glow. Adjust the lighting to your preference with the touch dimmer pad, offering four levels of illumination: low, medium, high, and off.

Powered by a time-only, quartz battery-operated movement, the Theodore Grandfather Clock requires one AA-sized battery and three D-sized batteries (not included), ensuring reliable performance.

For added stability on uneven or carpeted surfaces, four adjustable floor flanges provide steadfast support. Elevate your home décor with the Theodore Grandfather Clock – where timeless design meets contemporary functionality in perfect harmony.
