### RECOMMENDED MOUNTING HEIGHT

All range hoods have a recommended range of installation height over the cooking surface. However cooking styles, types of cooking equipment and installation limitation can vary greatly. For installations outside the recommended range - consult XO.

THESE MODELS HAVE A 8" DIAMETER EXHAUST DUCT WHICH MAY BE CONFIGURED FOR TOP OR REAR DISCHARGE - CONSULT MANUAL FOR ADDITIONAL INFORMATION.

### MAKE-UP AIR

Many states have adopted regulations regarding the re-introduction of make-up air for homes with ventilation systems which can exhaust more than a specified volume of air, typically 400 CFM.

Your cooking equipment and use determine how much ventilation you need. If your local building codes require a make-up air solution based on that need, XO has the answer.

### XOMA MAKE-UP AIR KITS

Make-Up Air Kits consist of two parts.

**1. A sensor collar which is mounted** in the exhaust duct of the hood. This contains a feather switch that is activated when air flow is detected in the duct.

**2. A motorized air inlet damper which is usually mounted to the home's HVAC system.**

When it receives a signal from the sensor collar, the damper automatically opens to admit fresh air which is distributed via the HVAC system.

When the blower shuts off, the feather switch returns to the off position and the motorized damper is deactivated. The air inlet damper is automatically closed by a return spring.
