Help maintain peak performance and fresh air in your kitchen with this replacement activated charcoal filter for your KitchenAid® or JennAir® Downdraft Induction Cooktop.

Designed for recirculation mode, this filter effectively traps and neutralizes odors. For optimal performance, replace the filter approximately every six months or after 150 operating hours.

Replacement is quick and easy - no need to remove drawers or plinths. Simply remove the air inlet nozzle, stainless steel grease filter, and filter replacement flap, then use the convenient strap to twist and lift out the old filter. The clearly marked symbols on the new filter ensure correct installation. Your KitchenAid® or JennAir® Cooktop even makes it easy to know when a replacement is due, automatically tracking operating hours and displaying an "F" in the fan indicator when a new filter is needed. Enjoy effective odor filtration, fresh ambient air, and a healthy indoor climate with this genuine replacement activated charcoal filter, compatible with recirculation versions of KitchenAid® and JennAir® cooktop downdraft systems.
