

Lecteur réseau à tubes
Tubes Network player

WTX-StreamTubes

THE ART OF STREAMING

What could be nicer than the sound of vinyls? this ability to make music more lively, less aggressive and truly «warmer».

Achieving this result seemed possible to us by combining several technologies and design. That's what we did !

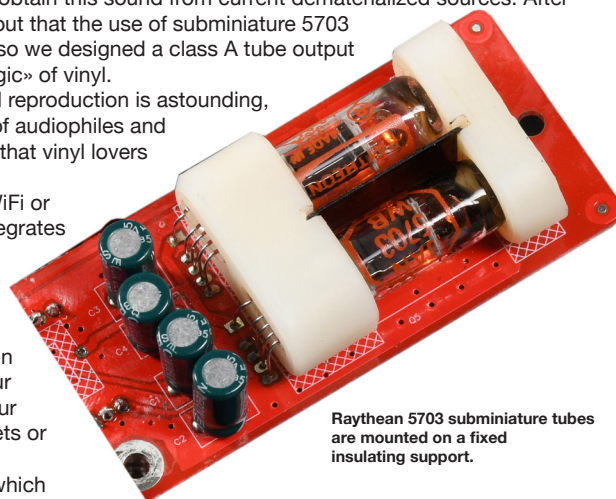

We have sought to obtain this sound from current dematerialized sources. After various prototypes, it turned out that the use of subminiature 5703 tubes was the ideal solution, so we designed a class A tube output stage which brought «the magic» of vinyl.

The resulting sound reproduction is astounding, respecting the requirements of audiophiles and recalling the warm musicality that vinyl lovers cherish.

The WTX-StreamTubes is a WiFi or ethernet network player, it integrates many streaming services like Spotify, Qobuz, Tidal, Deezer, Amazon Music, etc., several thousand local, national and global radio stations via Tuneln or vTuner, the playback of your nightclub stored locally on your computer, smartphones, tablets or network drive (NAS).

The StreamPro is multiroom which allows it to send a different or identical audio source to each room. Airplay and DLNA compatible.

The WTX-StreamPro has a proprietary Bluetooth port. You will be able to connect our Bluetooth Direct Digital X-FTB01 or X-FTB02 HD dongle via its proprietary port. So enjoy the warmth of tube sound from your Bluetooth sources.

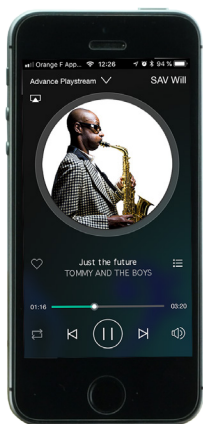

Raytheon 5703 subminiature tubes are mounted on a fixed insulating support.

The Advance Playstream application for controlling the WTX-StreamTubes is available for download free of charge from the AppStore (iOS) and GooglePlay store (Android).

SPECIFICATIONS

L'ART DU STREAMING

Quoi de plus agréable que le son des vinyles ? cette capacité à rendre la musique plus vivante, moins agressive et vraiment «plus chaleureuse».

Nous avons cherché à obtenir ce son à partir de sources dématérialisées actuelles. Après divers prototypes, il s'est avéré que l'utilisation de tubes subminiatures 5703 était la solution idéale, nous avons donc conçu un étage de sortie à tube de classe A qui apportait «la magie» du vinyle.

Atteindre ce résultat nous a semblé possible en combinant plusieurs technologies et design. C'est ce que nous avons fait !

Le WTX-StreamTubes est un lecteur réseau WiFi ou ethernet, il intègre de nombreux services de streaming comme Spotify, Qobuz, Tidal, Deezer, Amazon Music, etc, plusieurs milliers de radio locales, nationales et mondiales via TuneIn ou vTuner, la lecture de votre discothèque stockée en local sur votre ordinateur, vos smartphones, tablettes ou disque réseau (NAS).

Le StreamPro est multiroom ce qui lui permet d'envoyer une source audio différente ou identique dans chaque pièce. Compatible Airplay et DLNA.

Le WTX-StreamPro possède une connectique complète. Vous pourrez ainsi y connecter par son port propriétaire notre dongle Bluetooth Direct Digital X-FTB01 ou X-FTB02 HD.

L'application Advance Playstream permettant de piloter le WTX-StreamTubes est disponible gratuitement en téléchargement sur l'AppStore (iOS) et GooglePlay store (Android).
