Mango wood has high variations because of spalting that is commonly present. Colors and cuttings can range from golden brown to yellow to pink to black. Each piece is unique which is part of the charm and beauty of this hardwood. Additionally, Marble is a natural stone product and is known for its variation in color, carbon deposits and veining patterns. Variations in shade and markings are normal and can be expected with the natural materials used in the construction of this product. Due to the porous nature of marble, it is vulnerable to staining agents and high heat.

Avoid placing hot or wet items on surface. Coasters recommended
