

The WellFlex 2.0 is designed to complement the WellFlex 1.0, but with a medium feel. Like the 1.0 model, it also contains layers of memory foam that specialize in breathability, increased comfort, and extended coolness.

WellFlex 2.0

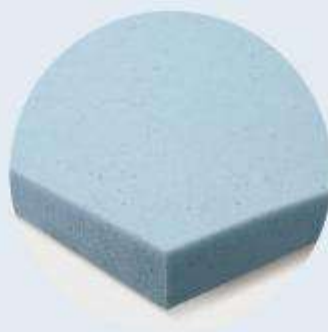

#### Cooling Knit Fabric Cover

This cover not only breathes, but the air flow creates a cooling sensation keeping you comfortable while you sleep. This highly advanced fabric stays cool-to-the-touch due to its superior breathability and temperature regulating properties that move heat away from the body.

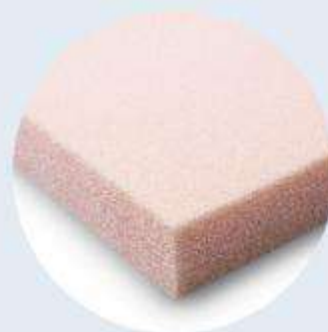

#### Gel AeroFusion™ Memory Foam

This material takes memory foam to the next level. Micro-channels optimize airflow and temperature regulation to ensure you stay cool while still getting the comfort and pressure-relieving benefits memory foam is famous for. In addition, it offers supportive spinal alignment while maintaining a plush feel. This foam was previously labeled as AirCell Foam.

#### Gel Memory Foam

This memory foam is generously infused with a cooling gel. It keeps all of the favorable properties of memory foam, like contouring and conforming to the sleeper, while mitigating temperature issues with the gel infusion.

#### AdaptiFoam™

This specialty foam is engineered to be open-cell for breathability with all the rebound and firm support of latex while being allergy-free. Previously labeled as Smart Foam, the properties of this foam offer exceptional airflow and premium comfort.

#### Flex Support Foam

Flex Support Foam is often the bottom layer of our mattresses. A mattress must provide the necessary support to keep the spine aligned so the sleeper's muscles relax instead of tightening to compensate. This high-grade foam completes the bottom of the mattress to provide long-lasting durability and support for the top layers.
