

# Full-range Wired Installation

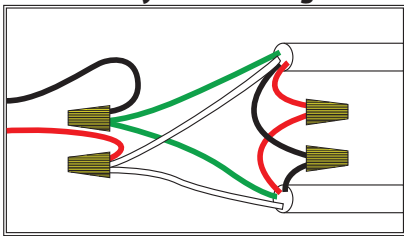

## 109AT70 System

### Features of this Architecture

1. Cost effective and simple.
2. Heavily relies on beneficial acoustic proximity to balance bass to top end.
3. Bass fully isolated from satellites for higher system maximum output levels (MOL) and low satellite stress.
4. LF trim when needed pulls MOL down substantially so care must be taken. You can't just boost lower octaves without clipping sats and saturating transformers, etc.

#### Left Channel Daisy-chain wiring.

#### Right Channel Daisy-chain wiring.
