

Outdoor Fabric (Cushions)

Designed for outdoor durability, our cushion cores are made from either quick-dry foam or a poly foam core wrapped in a waterproof casing. Each cushion is encased in a UV-resistant solution-dyed acrylic fabric to prevent fading and wear. Featuring non-corrosive zippers, the performance fabric covers are easy to remove and clean, ensuring long-lasting quality.

Care & Maintenance

- Brush off dirt, debris, and standing water regularly to prevent soiling.
- Blot spills with a clean, dry cloth. Spot clean with mild soap and water, rinse thoroughly and air dry. A very soft bristle brush may be used to lightly agitate the spill.
- For oil based spills, apply an absorbent such as cornstarch and remove with a straight edge.
- For mold or mildew, prepare 1 cup bleach, 1/4 cup mild soap to 1 gallon water, let soak, lightly brush, rinse and air dry.
- Store cushions in a dry place when not in use.
- We strongly recommend using outdoor covers to protect furniture from the elements and minimize aging. (Avoid covering for long periods to prevent internal moisture buildup.)
- If cushions get wet, turn them on their sides with the zipper open and facing downward, allowing all water to drain.
