

ENVIROTEC PREMIER

Arizona's best whole house water treatment system, treating not only the Valley's extreme hardness but also addressing our high chlorine/chloramine, as well as pesticides, herbicides, VOC's and many other compounds in our water. Our multi tank twin alternating "Premier" system provides high quality treated water 24/7, even during regeneration. Your Home and Family deserve the best, Envirotec Premier is the Southwest's best blend of Quality, Value, and Warranty! Made in the Desert for the Desert and our harsh water conditions!

ENVIROTWIN ALTERNATING VALVE:

On demand regeneration means you'll always have softened and filtered water even while your system is in regeneration. Heavy laundry day? House guests? No problem. The Premier system with its high flow rates and alternating valve helps to prevent hard water bleed through while maximizing media beds to optimize efficiency.

CATEGORY ONE RESIN:

Extreme temperature resin designed for extreme climates ranging from deserts to mountains. Outlasts the competition and is backed by a **Limited Lifetime Warranty**.

TRICARBON™ BLEND

Our exclusive blend of three types of Carbon (coconut, coal, catalytic) reduces a wide range of impurities found in our water, chlorine, chloramines, volatile organic compounds, and pesticides to name a few.

SOFTENING BENEFITS

- Extends the life of water using appliances
- Softer longer lasting clothes, linens and towels
- Use less soap and detergents
- Leaves hair and skin feeling vibrant and soft
- Reduces spotting etching of dishes and glassware
- Improved water taste and smell

INDUSTRY BEST WARRANTY

Dimensions:
67"H x 37"W x 13"D

Combine with our most efficient RO, the **ET6500** for the ultimate in water treatment for your home

ET6500 6-STAGE REVERSE OSMOSIS SYSTEM

Designed for harsher water conditions with higher production needs.

STAGE ONE: SEDIMENT FILTRATION

Sediment reduction to 1 micron; 40 times smaller than visible to human eye

STAGE TWO: ULTRA PRE-FILTRATION

½ micron carbon filtration has highest chemical absorption rate of any similar dimension carbon block filter. The best in RO Membrane Protection!

STAGE THREE: HIGH FLOW ECO MEMBRANE

Encapsulated thin layer composite (TLC) membrane produces 50 GPD of purified water. Double the recovery of standard membranes. Ultra-efficient, filters down to the molecular level to remove total dissolved solids (TDS). NEW TECHNOLOGY! Less waste, faster production

STAGE FOUR: ECT™ FILTRATION

This design feature extends the water contact time with the carbon 60 times longer than our competitors, thus doing a better job of reducing contaminants. Reduces contaminants that other RO systems miss!

STAGE FIVE: REMINERALIZATION FILTER

Adds minerals back into the water and helps to increase the pH of the water.

STAGE SIX: POLISHING FILTER

Water passes through a specific coconut carbon blend flavor filter to ensure the best-tasting water.
