- 1.5" Gel Memory Foam
- 1" Flex Support Foam
- 6.3" Hybrid Base with Individually Pocketed Springs
- 1" Flex Support Base Foam

**Fusion Supreme**

## Double Jacquard Fabric Cover

With a very soft-to-the-touch feel and the critical ability to let air flow easily, this fabric offers comfort, function, and durability. Its interlaced threads throughout the cover move with you to reduce bunching and create natural air gaps for breathability.

## Gel AeroFusion™ Memory Foam

This material takes memory foam to the next level. Micro-channels optimize airflow and temperature regulation to ensure you stay cool while still getting the comfort and pressure-relieving benefits memory foam is famous for. In addition, it offers supportive spinal alignment while maintaining a plush feel. This foam was previously labeled as AirCell Foam.

## Gel Memory Foam

This memory foam is generously infused with a cooling gel. It keeps all of the favorable properties of memory foam, like contouring and conforming to the sleeper, while mitigating temperature issues with the gel infusion.

## Individually Pocketed Springs

The specially crafted pocketed coil system allows the mattresses to be rolled and compressed for easy shipping. In addition, our pocketed coils are unmatched in their ability to support and conform, letting the sleeper relax and rejuvenate. The fabric exterior wrapping of the individual springs improves airflow through the coils to keep the sleeper comfortable.

## Flex Support Foam

Flex Support Foam is often the bottom layer of our mattresses. A mattress must provide the necessary support to keep the spine aligned so the sleeper's muscles relax instead of tightening to compensate. This high-grade foam completes the bottom of the mattress to provide long-lasting durability and support for the top layers.
