

VANDERSTEEN

Vandersteen *Powered Bass* with *Room EQ* Just Got Affordable!

The SUB THREE approaches ... the 2Wq is now Discontinued

The venerable 2Wq, in continuous production since the 1980s and arguably the most popular high-end subwoofer of all time, is finally giving way. The 2Wq is now officially discontinued, and it's time to get ready to meet its amazing new replacement, the *SUB THREE*.

The SUB THREE will be available to customers in June of 2018 and is available for dealer order NOW. SRP is \$2,490 each. There are a LOT of 2W and 2wq owners who are going to want to hear all about this tremendous new upgrade opportunity!

The SUB THREE employs Vandersteen's signature powered-bass technique, which places a passive high-pass filter at the input of the main amplifier. This method makes the SUB THREE a great addition to speaker systems of any brand, compact or floorstanding, and is crucial to achieving the "unbeatable powered bass" performance fans and reviewers alike have lauded in Vandersteen's powered-bass systems for decades. "High-passing" the main amplifier is the only way to get flat frequency response at the crossover point between the main speakers and powered subwoofer, and also improves midrange and treble performance dramatically. When the main amplifier is relieved of deep bass duty, intermodulation distortion is reduced and the midrange and treble take flight and float freely in the room. This is the most musically righteous way of integrating a subwoofer into a speaker system, period.

The SUB THREE also incorporates one of Vandersteen's most innovative and enduring technologies- 11-band room EQ for *perfect bass in virtually any room*. This technology originated with Vandersteen's Model 5, and today is employed in the flagship Model Seven Mk II (\$62k/pr.) and reference SUB NINE powered subwoofers (\$18,900/pr.). Over time this crucial technology has been employed in Vandersteen's Model 5A and Model 5A Carbon (\$31,300/pr.), but prior to the SUB THREE the least expensive path to Vandersteen room EQ was the Quatro Wood CT at \$14,600/pr.

Vandersteen's legendary powered-bass with room EQ is now more accessible than ever!

SUB THREE Specs

325-watt Bridged Power Amp with Regulated Switching Power Supply

11-Band Room EQ for *Perfect Bass in Virtually Any Room*

3 x 8" Cast-Aluminum Basket Cellulose-Fiber Woofer Cones with Ultra Long-Throw Motor Assembly
