Jamo A 360

Our innovative, ultra-flat A 360 loudspeaker - which measures just 92mm (3.6in) deep - combines left, center and right channel speakers in a single, sleek enclosure. The A 360 is a perfect partner for the latest generation flatscreen displays and is also designed to match the rest of the A 3 series so you can mix'n'match it with other speakers from the range.

Despite its relatively compact size, the A 360 features six individual drive units - three 90mm bass drivers plus three 90mm co-axial midrange

drivers, with integral 19mm tweeters. Each of the channels—left, center and right—is taken care of by an individual pairing of bass and midrange/tweeter drivers, arranged in a 2½-way configuration.

This is a proper home cinema speaker (complete with magnetic shielding), that's incredibly convenient. Thanks to a unique, adjustable wall-mounting system, the bracket can be aimed directly towards the listening position.
