Revised: 10-2-2023

WARNING

Only qualified service technicians should install and service the appliance. To obtain the name and phone number of your local Hoshizaki Certified Service Representative, visit www.hoshizakiamerica.com. No installation or service should be undertaken until the technician has thoroughly read this Instruction Manual. Likewise, the owner/manager should not proceed to operate the appliance until the installer has instructed them on its proper operation. Failure to install, operate, and maintain the appliance in accordance with this manual will adversely affect safety, performance, component life, and warranty coverage and may result in costly water damage. Proper installation is the responsibility of the installer. Product failure or property damage due to improper installation is not covered under warranty.

Hoshizaki provides this manual primarily to assist qualified service technicians in the installation, maintenance, and service of the appliance.

Should the reader have any questions or concerns which have not been satisfactorily addressed, please call, send an e-mail message, or write to the Hoshizaki Technical Support Department for assistance.

Phone: 1-800-233-1940; (770) 487-2331

Fax: 1-800-843-1056; (770) 487-3360

E-mail: techsupport@hoshizaki.com

HOSHIZAKI AMERICA, INC.

618 Highway 74 South

Peachtree City, GA 30269

Attn: Hoshizaki Technical Support Department

NOTE: To expedite assistance, all correspondence/communication **MUST** include the following information:

- Model Number _____
- Serial Number _____
- Complete and detailed explanation of the problem.

IMPORTANT

This manual should be read carefully before the appliance is installed and operated. Read the warnings and guidelines contained in this manual carefully as they provide essential information for the continued safe use and maintenance of the appliance. Retain this manual for any further reference that may be necessary.

Important Safety Information

Throughout this manual, notices appear to bring your attention to situations which could result in death, serious injury, damage to the appliance, or damage to property.

⚠ WARNING Indicates a hazardous situation which could result in death or serious injury.

NOTICE Indicates a situation which could result in damage to the appliance or property.

IMPORTANT Indicates important information about the installation, use, and care of the appliance.

⚠ WARNING

The appliance should be destined only to the use for which it has been expressly conceived. Any other use should be considered improper and therefore dangerous. The manufacturer cannot be held responsible for injury or damage resulting from improper, incorrect, and unreasonable use. Failure to install, operate, and maintain the appliance in accordance with this manual will adversely affect safety, performance, component life, and warranty coverage and may result in costly water damage.

To reduce the risk of death, electric shock, serious injury, or fire, follow basic precautions including the following:

- Only qualified service technicians should install and service the appliance.
- The appliance must be installed in accordance with applicable national, state, and local codes and regulations.
- Electrical connection must be hard-wired and must meet national, state, and local electrical code requirements. Failure to meet these code requirements could result in death, electric shock, serious injury, fire, or damage.
- The icemaker requires an independent power supply of proper capacity. See the nameplate for electrical specifications. Failure to use an independent power supply of proper capacity can result in a tripped breaker, blown fuse, damage to existing wiring, or component failure. This could lead to heat generation or fire.
- **THE ICEMAKER MUST BE GROUNDED.** Failure to properly ground the icemaker could result in death or serious injury.
- To reduce the risk of electric shock, do not touch the control switch with damp hands.
- Move the control switch to the "OFF" position and turn off the power supply before servicing. Lockout/Tagout to prevent the power supply from being turned back on inadvertently.
- Do not make any alterations to the appliance. Alterations could result in electric shock, serious injury, fire, or damage.
- The appliance is not intended for use by persons (including children) with reduced physical, sensory, or mental capabilities, or lack of experience and knowledge, unless they have been given supervision or instruction concerning use of the appliance by a person responsible for their safety.

⚠ WARNING, continued

- Children should be properly supervised around the appliance.
- Do not climb, stand, or hang on the appliance or allow children or animals to do so. Serious injury could occur or the appliance could be damaged.
- Do not use combustible spray or place volatile or flammable substances near the appliance. They might catch fire.
- Keep the area around the appliance clean. Dirt, dust, or insects in the appliance could cause harm to individuals or damage to the appliance.

Additional Warning for Remote Models

- **THE REMOTE CONDENSER UNIT MUST BE GROUNDED.** The power supply and ground connection to the remote condenser unit are supplied from the icemaker. Failure to properly ground the remote condenser unit could result in death or serious injury.
- Wire routing (conduit) and disconnect (if required) must meet national, state, and local electrical code requirements. Failure to meet these code requirements could result in death, electric shock, serious injury, fire, or damage.

NOTICE

- Follow the water supply, drain connection, and maintenance instructions carefully to reduce the risk of costly water damage.
- In areas where water damage is a concern, install in a contained area with a floor drain.
- Install the icemaker in a location that stays above freezing. Normal operating ambient temperature must be within 45°F to 100°F (7°C to 38°C).
- Do not leave the icemaker on during extended periods of non-use, extended absences, or in sub-freezing temperatures. To properly prepare the icemaker for these occasions, follow the instructions in "IV. Preparing the Icemaker for Periods of Non-Use."
- Do not place objects on top of the appliance.
- The dispenser unit/ice storage bin is for ice use only. Do not store anything else in the dispenser unit/ice storage bin.

I. Specifications

A. Electrical and Refrigerant Data

The rating label and nameplate provide electrical and refrigerant data. The rating label can be seen by removing the front panel. The nameplate is located on the rear panel. For certification marks, see the nameplate.

We reserve the right to make changes in specifications and design without prior notice.

B. Dimensions/Connections

1. Air-Cooled Models (SAJ/3)

Units: mm [in.]

NOTICE

- For all models except KM-1601SAJ/3, allow 6" (15 cm) clearance at rear, sides, and top for proper air circulation and ease of maintenance and/or service should they be required. For KM-1601SAJ/3, allow 9" (23 cm) clearance at rear, sides, and top.
- The ice storage bin opening must match the bottom opening as in the illustration.

2. Water-Cooled Models (SWJ/3)

Units: mm [in.]

	KM-1301SWJ/3	KM-1601SWJ/3	KM-1900SWJ/3 KM-2200SWJ3	KM-2600SWJ3
A	695 [27-3/8]	695 [27-3/8]	925 [36-3/8]	925 [36-3/8]
B	643 [25-3/8]	643 [25-3/8]	873 [34-3/8]	873 [34-3/8]
C	115 [4-1/2]	115 [4-1/2]	130 [5-1/8]	130 [5-1/8]
D	164 [6-1/2]	199 [7-7/8]	298 [11-3/4]	162 [6-3/8]
E	74 [2-7/8]	85 [3-3/8]	85 [3-3/8]	110 [4-3/8]

NOTICE

- Allow 6" (15 cm) clearance at rear, sides, and top for proper air circulation and ease of maintenance and/or service should they be required.
- The ice storage bin opening must match the bottom opening as in the illustration.

3. Remote Models KM-1301SRJZ/3 and KM-1601SRJZ/3

Units: mm [in.]

	KM-1301SRJZ/3	KM-1601SRJZ/3
A	695 [27-3/8]	695 [27-3/8]
B	643 [25-3/8]	643 [25-3/8]
C	115 [4-1/2]	115 [4-1/2]
D	442 [17-3/8]	442 [17-3/8]
E	115 [4-1/2]	115 [4-1/2]
F	76 [3]	100 [3-7/8]
G	76 [3]	100 [3-7/8]

NOTICE

- Allow 6" (15 cm) clearance at rear, sides, and top for proper air circulation and ease of maintenance and/or service should they be required.
- The ice storage bin opening must match the bottom opening as in the illustration.

4. Remote Models KM-1900SRJZ/3, KM-2200SRJZ3, and KM-2600SRJZ3

Units: mm [in.]

NOTICE

- Allow 6" (15 cm) clearance at rear, sides, and top for proper air circulation and ease of maintenance and/or service should they be required.
- The ice storage bin opening must match the bottom opening as in the illustration.

5. Remote Condenser Unit URC-14FZ (use with KM-1301SRJZ/3)

NOTICE

Allow 24" (61 cm) clearance at front and rear for proper air circulation and ease of maintenance and/or service should they be required.

Icemaker Model	URC-14FZ Heat of Rejection AT 90°F (32°C) WT 70°F (21°C)
KM-1301SRJZ	18,900 BTU/hr
KM-1301SRJZ3	18,800 BTU/hr

Units: mm [in.]

Top

Rear

6. Remote Condenser Unit URC-22FZ (use with KM-1601SRJZ/3, KM-1900SRJZ/3, KM-2200SRJZ3) and URC-26JZ (use with KM-2600SRJZ3)

NOTICE

Allow 24" (61 cm) clearance at front and rear for proper air circulation and ease of maintenance and/or service should they be required.

Icemaker Model	URC Model	Heat of Rejection AT 90°F (32°C) WT 70°F (21°C)
KM-1601SRJZ	URC-22FZ	21,200 BTU/hr
KM-1601SRJZ3	URC-22FZ	20,000 BTU/hr
KM-1900SRJZ	URC-22FZ	24,200 BTU/hr
KM-1900SRJZ3	URC-22FZ	20,700 BTU/hr
KM-2200SRJZ3	URC-22FZ	26,700 BTU/hr
KM-2600SRJZ3	URC-26JZ	36,000 BTU/hr

Units: mm [in.]

Rear

II. Installation and Operating Instructions

WARNING

- The appliance must be installed in accordance with applicable national, state, and local codes and regulations.
- Failure to install, operate, and maintain the appliance in accordance with this manual will adversely affect safety, performance, component life, and warranty coverage and may result in costly water damage.
- **CHOKING HAZARD:** Ensure all components, fasteners, and thumbscrews are securely in place after installation. Make sure that none have fallen into the dispenser unit/ice storage bin.

A. Location

NOTICE

- The icemaker is not intended for outdoor use. Normal operating ambient temperature must be within 45°F to 100°F (7°C to 38°C); Normal operating water temperature must be within 45°F to 90°F (7°C to 32°C). Operation of the icemaker, for extended periods, outside of these normal temperature ranges may affect icemaker performance.
- The icemaker will not work at sub-freezing temperatures. To prevent damage to the water supply line, drain the icemaker if the air temperature is going to go below 32°F (0°C). See "IV. Preparing the Icemaker for Periods of Non-Use."

- The icemaker should not be located next to ovens, grills, or other high heat producing equipment.
- For all models except KM-1601SAJ/3, allow 6" (15 cm) clearance at rear, sides, and top for proper air circulation and ease of maintenance and/or service should they be required. For KM-1601SAJ/3, allow 9" (23 cm) clearance at rear, sides, and top.
- The location should provide a firm and level foundation for the appliance.

B. Checks Before Installation

- Visually inspect the exterior of the shipping container and immediately report any damage to the carrier. Upon opening the container, any concealed damage should also be immediately reported to the carrier.
- Remove the shipping carton, tape, and packing material. If any are left in the appliance, it will not work properly.
- See the nameplate on the rear panel, and check that your voltage supplied corresponds with the voltage specified on the nameplate.
- Remove the panels to prevent damage when installing the appliance. See "II.C. How to Remove Panels."
- Remove the package containing the accessories.

- Remove the protective plastic film from the panels. If the appliance is exposed to the sun or to heat, remove the film after the appliance cools.
- Check that the refrigerant lines do not rub or touch lines or other surfaces, and that the fan blade (if applicable) turns freely.
- Check that the compressor is snug on all mounting pads.
- The icemaker can be installed on a dispenser unit or ice storage bin. The ice storage bins listed below are recommended.

Model Number	Bin Width	Recommended Hoshizaki Ice Storage Bin
KM-1301S_J(Z)/3 KM-1601S_J(Z)/3 KM-1900S_J(Z)/3 KM-2200S_J(Z)/3 KM-2600S_J(Z)/3	48" or Wider	B-800 Series

For further options, contact your local Hoshizaki distributor.

- **NOTICE! Remote models must be connected to an appropriate remote condenser unit. The remote condenser units listed below are recommended. Connection to a different remote condenser unit will void the warranty unless Hoshizaki approves a different remote condenser unit for your specific application. For further details, contact your local Hoshizaki distributor.**

Model Number	Recommended Hoshizaki Remote Condenser Unit
KM-1301SRJZ/3	URC-14FZ
KM-1601SRJZ/3 KM-1900SRJZ/3 KM-2200SRJZ3	URC-22FZ
KM-2600SRJZ3	URC-26JZ

C. How to Remove Panels

See Fig. 1

- Front Panel: Remove the screws. Lift up and pull towards you.
- Top Panel: Remove the screws, then lift off.
- Right Side Panel: Remove the screw. Slide forward slightly and lift off.
- Insulation Panel: Remove the thumbscrew. Lift up slightly and pull towards you.
- Top Insulation: Lift off.
- Spacer: Lift off.

Fig. 1

D. Setup

1. Dispenser Unit/Ice Storage Bin and Icemaker Setup

⚠ WARNING

The installer must ensure the dispenser unit/ice storage bin is compatible with the icemaker, and the dispenser unit/ice storage bin and icemaker are properly attached and secured.

- 1a) **Dispenser Unit:** Follow the dispenser unit's setup procedure.
- 1b) **Ice Storage Bin:** Unpack the ice storage bin and attach the 4 adjustable legs provided (bin accessory) to the bottom of the ice storage bin.
- 2) Position the dispenser unit/ice storage bin in its permanent location.
- 3) If required, install an adapter kit or top kit. Contact your local Hoshizaki distributor for recommendations.
- 4) Level the dispenser unit/ice storage bin in both the left-to-right and front-to-rear directions. If using an ice storage bin, adjust the ice storage bin legs to level.
- 5) Place the icemaker on top of the dispenser unit/ice storage bin.
- 6a) **Dispenser Unit:** Follow the dispenser unit, adapter kit, or top kit instructions for securing the icemaker. If no instructions are available, secure the icemaker using the mounting brackets provided. Rotate the mounting brackets so that they fit flush to the dispenser unit. See Fig. 2a. Secure the mounting brackets to the icemaker with the bolts provided. Secure the mounting brackets to the dispenser unit with self-tapping screws (not provided). **NOTICE! Use care to avoid damage to dispenser unit components when attaching the mounting brackets.**
- 6b) **Ice Storage Bin:** Follow the ice storage bin, adapter kit, or top kit instructions for securing the icemaker. If no instructions are available, secure the icemaker using the 2 mounting brackets and the bolts provided. See Fig. 2b.

2. Bin Control Installation

NOTICE

Before operating the icemaker, the bin control must be installed. Failure to properly install the bin control could result in ice backup and icemaker damage.

- 1) Remove the baffle from the storage bin.
- 2) Remove the thumbscrew and bin control assembly from inside the icemaker. See Fig. 3.
- 3) Use the thumbscrew removed in the previous step and the thumbscrew included in the accessory bag to secure the bin control assembly to the bottom of the icemaker. See Fig. 4.
- 4) Remove the bin control cable bracket from inside the icemaker, then route the bin control cable through the hole in the bottom of the icemaker and the bushing in the bin control cable bracket. Secure the bin control cable bracket. Leave as little slack as possible inside the storage bin. Route the cable through the wire saddles.

Fig. 3

Connection Detail

Fig. 4

- 5) Connect the bin control cable connector to wire harness connector A coming from the control box.

Note:

- Wire harness has one connector (connector A) to plug into the bin control cable and another connector (connector B) for use if an upper unit is installed.
- Wire harness is connected to the control board red K4 connector.

- 6) Make sure the bin control cable and wire harness are secured in the wire saddles and do not interfere with any components.
- 7) Replace the panels and storage bin baffle in their correct positions unless you are installing an upper unit. If installing an upper unit, see "II.D.3. Installation of Upper Unit."

3. Installation of Upper Unit

- 1) See "II.D.1. Dispenser Unit/Ice Storage Bin and Icemaker Setup" and "II.D.2. Bin Control Installation" for the lower unit installation.
- 2) Remove the top panel and the top insulation of the lower unit. The top panel and the top insulation of the lower unit are not required when installing an upper unit.
- 3) Unpack the upper unit and remove the shipping carton, tape, and packing material.
- 4) Remove the panels of the upper unit.
- 5) Stack the upper unit on top of the lower unit.
- 6) Secure the upper unit to the lower unit using the 2 mounting brackets and the bolts provided. See Fig. 5. Note: When stacking air or water models, or KM-1301 or KM-1601 remote models, on top of KM-1900, KM-2200, or KM-2600 remote models, use 5×12 self-tapping screws (not provided) to secure mounting brackets to the upper model.
NOTICE! Do not use screws longer than 12 mm (1/2"). Screws longer than 12 mm (1/2") will puncture evaporator case.

Fig. 5

- 7) Remove the bin control cable bracket from inside the upper unit. See Fig. 6. Leave the upper unit's bin control assembly in its original position. It will not be used.
- 8) Route lower unit wire harness connector B through the hole in the bottom of the upper unit. Route the wiring through the bushing in the bin control cable bracket, then through the wire saddles.
- 9) Connect lower unit wire harness connector B to upper unit wire harness connector A.
- 10) Make sure the wire harnesses are secured in the wire saddles and do not interfere with any components.
- 11) Secure the bin control cable bracket.
- 12) Replace the panels and storage bin baffle in their correct positions.

Fig. 6

E. Electrical Connection

WARNING

For All Models

- Electrical connection must be hard-wired and must meet national, state, and local electrical code requirements. Failure to meet these code requirements could result in death, electric shock, serious injury, fire, or damage.
- The icemaker requires an independent power supply of proper capacity. See the nameplate for electrical specifications. Failure to use an independent power supply of proper capacity can result in a tripped breaker, blown fuse, damage to existing wiring, or component failure. This could lead to heat generation or fire.
- **THE ICEMAKER MUST BE GROUNDED.** Failure to properly ground the icemaker could result in death or serious injury.
- Electrical connection must be made in accordance with the instructions on the "WARNING" tag, provided with the pig tail leads in the junction box. See Fig. 7.

Additional Warnings for Remote Models

- **THE REMOTE CONDENSER UNIT MUST BE GROUNDED.** Power supply and ground connection to the remote condenser unit are supplied from the icemaker. See "II.G.6. Electrical Connection." Failure to properly ground the remote condenser unit could result in death or serious injury.
- To reduce the risk of electric shock, make all remote condenser unit connections before connecting the icemaker power supply.

NOTICE

On remote models, the appliance must have power for a minimum of 4 hours prior to startup to prevent compressor damage.

- Usually an electrical permit and services of a licensed electrician are required.
- The maximum allowable voltage variation is ± 10 percent of the nameplate rating.
- **NOTICE!** On single phase KM-1301S_J(Z) models, the main transformer's voltage tap switch must be positioned to match incoming voltage at startup.
- **NOTICE!** On single phase KM-1601S_J(Z) and KM-1900S_J(Z) models, the white lead must be connected to the neutral conductor of the power source. Miswiring may result in severe damage to the icemaker.
- **NOTICE!** On three phase models, the main transformer's voltage tap switch must be positioned to match incoming voltage at startup.
- **NOTICE!** On three phase models, connect the highest incoming voltage supply ("stinger leg") to the power wire dedicated to the compressor. See the wiring label on the icemaker.
- The opening for the power supply connection is 7/8" DIA to fit a 1/2" trade size conduit.

Fig. 7

F. Water Supply and Drain Connections

See Figs. 8 through 10

WARNING

Water supply and drain connections must be installed in accordance with applicable national, state, and local regulations.

NOTICE

- Normal operating water temperature should be within 45°F to 90°F (7°C to 32°C). Operation of the appliance, for extended periods, outside of this normal temperature range may affect appliance performance.
- Water supply pressure must be a minimum of 10 PSIG and a maximum of 113 PSIG. If the pressure exceeds 113 PSIG, the use of a pressure reducing valve is required.
- To prevent damage to the appliance, do not operate the appliance when the water supply is off, or if the pressure is below 10 PSIG. Do not run the appliance until the proper water pressure is reached.
- External filters, strainers, or softeners may be required depending on water quality. Contact your local Hoshizaki Certified Service Representative or local Hoshizaki distributor for recommendations.

- A plumbing permit and services of a licensed plumber may be required in some areas.
- The icemaker drain line, dispenser unit/ice storage bin drain line, and water-cooled condenser drain line (if applicable) must be run separately. The condensation drain line can be connected to the icemaker drain line or can be run separately.
- Drain lines must have 1/4" fall per foot (2 cm per 1 m) on horizontal runs to get a good flow. A vented tee connection is also required for proper flow.
- Drain lines should not be piped directly to the sewer system. An air gap of a minimum of 2 vertical inches (5 cm) should be between the end of the drain pipes from the icemaker and condensation drain, dispenser unit/ice storage bin, and water-cooled condenser (if applicable) and the floor drain.

1. Icemaker

Icemaker Water Supply Inlet	Minimum Icemaker Water Supply Line Size	Icemaker Drain Outlet	Minimum Icemaker Drain Line Size	Condensation Drain Outlet
1/2" Female Pipe Thread (FPT)	3/8" Nominal ID Copper Water Tubing or Equivalent	3/4" Female Pipe Thread (FPT)	3/4" Nominal ID Hard Pipe or Equivalent	3/8" OD Hard Tube

- An icemaker water supply line shut-off valve and drain valve must be installed.
- Be sure there is sufficient extra water supply line and drain line for the appliance to be pulled out for service.

Fig. 8 **Air-Cooled and Remote Models**
Model Shown:
KM-1601SRJZ

2. Water-Cooled Condenser

a) Connection to an Open Drain System

Condenser Water Supply Inlet	Minimum Condenser Water Supply Line Size	Condenser Drain Outlet	Minimum Condenser Drain Line Size
1/2" Female Pipe Thread (FPT)	3/8" Nominal ID Copper Water Tubing or Equivalent	3/8" Female Pipe Thread (FPT)	3/8" Nominal ID Hard Pipe or Equivalent

- A condenser water supply line shut-off valve and drain valve must be installed.
- In some areas, a back flow preventer may be required in the cooling water circuit.
- In order to maintain the proper high side pressure, the condenser water supply inlet temperature should not drop below 45°F (7°C) and the condenser drain outlet temperature must be in the 104°F to 115°F (40°C to 46°C) range. Once the icemaker installation is complete, confirm the condenser drain outlet temperature 5 minutes after a freeze cycle starts. If the condenser drain outlet temperature is not in the proper range, use a flat blade screwdriver to rotate the adjustment screw on the water-regulating valve until the temperature is in the proper range (rotate counterclockwise to raise temperature or clockwise to lower temperature).

Fig. 9
Model Shown:
KM-1601SWJ **Water-Cooled Models**
Connection to an Open Drain System

b) Connection to a Closed Loop System

Condenser Water Supply Inlet	Minimum Condenser Water Supply Line Size	Condenser Return Outlet	Minimum Condenser Return Line Size
1/2" Female Pipe Thread (FPT)	3/8" Nominal ID Copper Water Tubing or Equivalent	3/8" Female Pipe Thread (FPT)	3/8" Nominal ID Copper Water Tubing or Equivalent

- Shut-off valves and drain valves must be installed at both the condenser water supply inlet and condenser return outlet.
- Minimum water flow to the condenser is 4 GPM.
- The pressure differential between the condenser water supply inlet and condenser return outlet must be no less than 10 PSIG.
- When using a glycol blend, the solution mixture should be less than 30% glycol.
- In order to maintain the proper high side pressure, the condenser water supply inlet temperature should not drop below 45°F (7°C) and the condenser return outlet temperature must be in the 104°F to 115°F (40°C to 46°C) range. Once the icemaker installation is complete, confirm the condenser return outlet temperature 5 minutes after a freeze cycle starts. If the condenser return outlet temperature is not in the proper range, use a flat blade screwdriver to rotate the adjustment screw on the water-regulating valve until the temperature is in the proper range (rotate counterclockwise to raise temperature or clockwise to lower temperature).

G. Installation of Remote Condenser Unit

⚠ WARNING

- Installation of remote condenser unit must be performed by properly trained and EPA-certified service personnel.
- The remote condenser unit must be installed in accordance with applicable national, state, and local codes and regulations.
- Failure to install the remote condenser unit within these guidelines may adversely affect safety, performance, component life, and warranty coverage.
- Power supply and ground wire to the remote condenser unit are supplied from the icemaker. For details, see section "II.G.6. Electrical Connection."

1. Location

NOTICE

- The remote condenser unit is intended for outdoor use. Normal operating ambient temperature must be within -20°F to $+122^{\circ}\text{F}$ (-29°C to $+50^{\circ}\text{C}$). Operation of the remote condenser unit, for extended periods, outside of this normal temperature range may affect appliance performance.
- The maximum line length for the standard line sizes and refrigerant charge is 66' (20 m). With larger line sizes and/or additional refrigerant, the maximum line length is 100' (30.5 m). For details, see "II.G.4 Line Set Size and Refrigerant Charge."
- The maximum vertical distance between the remote condenser unit and the icemaker is 33' (10 m) above or 10' (3 m) below the icemaker. These distances are measured fitting to fitting. See Fig. 11.

The remote condenser unit must be positioned in a permanent site under the following guidelines:

- A firm and flat site.
- A dry and well ventilated area with 24" (61 cm) clearance at front and rear for proper air circulation and ease of maintenance and/or service should they be required. See Fig. 12.

Fig. 11

Fig. 12

2. Checks Before Installation

- 1) Remove the shipping carton, tape, and packing material.
- 2) Check that the refrigerant lines do not rub or touch lines or other surfaces, and that the fan blades move freely.

3. Setup

- 1) Assemble 2 sets of legs using the legs, bolts, and nuts provided. See Fig. 13.
- 2) Position 1 of the plates provided between a set of legs and the remote condenser unit, then secure the legs to the remote condenser unit with the bolts and nuts provided. Repeat on the other side with the remaining set of legs.
- 3) The bottom of each leg has a mounting hole. Secure the legs to the permanent site with 4 bolts (not included).

Fig. 13

4. Line Set Size and Refrigerant Charge

NOTICE

The icemaker, line set, and remote condenser unit must contain the same type of refrigerant. Mixing of refrigerants will result in improper operation and possible damage to the refrigeration system.

Line Set Size and Refrigerant Charge							
Hoshizaki Icemaker	Hoshizaki Remote Condenser Unit	Line Set Up to 66' (20 m)			Line Set Greater than 66' (20 m) Maximum 100' (30.5 m)		
		Liquid Line	Discharge Line	Charge Adjustment	Liquid Line	Discharge Line	Charge Adjustment (R-404A)
KM-1301SRJZ/3	URC-14FZ	3/8" OD	1/2" OD	Not Applicable	3/8" OD	1/2" OD	Add 0.4 oz. for each foot over 66' (40 g for each meter over 20 m). Write new total charge on icemaker's rating label.
KM-1601SRJZ/3 KM-1900SRJZ/3 KM-2200SRJZ3	URC-22FZ	3/8" OD	5/8" OD	Not Applicable	3/8" OD	5/8" OD	Add 0.4 oz. for each foot over 66' (40 g for each meter over 20 m). Write new total charge on icemaker's rating label.
KM-2600SRJZ3	URC-26JZ						

5. Line Set Installation

⚠ WARNING

- At atmospheric pressure and temperatures up to 176°F (80°C).
- R-404A itself is not explosive or poisonous. However, when exposed to high temperatures (open flames), R-404A can be decomposed to form hydrofluoric acid and carbonyl fluoride both of which are hazardous.
- Do not use silver alloy or copper alloy containing arsenic.
- Use an electronic leak detector or soap bubbles to check for leaks. Add a trace of refrigerant to the line set tubing through the service valve access ports (if using an electronic leak detector), and then raise the pressure using nitrogen gas (140 PSIG). Do not use R-404A as a mixture with pressurized air for leak testing.

NOTICE

- Do not open any service valve until the line set installation is complete and leak tested.
- Ensure that there are no traps and no kinks in the line set.
- Do not coil extra line set.

- 1) Factory line set or appropriate size copper tubing. When field fabricating, insulate the copper tubes separately.
 - The maximum line length for the standard line sizes and refrigerant charge is 66' (20 m). With larger line sizes and/or additional refrigerant, the maximum line length is 100' (30.5 m). For details, see "II.G.4 Line Set Size and Refrigerant Charge."
- 2) Remove any extra line set length, then insulate the two copper tubes separately.
- 3) Remove the Schrader valve cores from the icemaker service valves.
- 4) Braze the line set copper tubes to the icemaker liquid and discharge line service valves.

NOTICE

- Before brazing, remove the Schrader valve cores from the service valve access ports.
- When brazing, protect the service valve by using a wet cloth to prevent the service valve from overheating.
- Braze all fittings while purging with nitrogen gas flowing at a pressure of 3 to 4 PSIG.

- 5) Remove the Schrader valve cores from the remote condenser unit service valve access ports.
- 6) Braze the line set copper tubes to the remote condenser unit liquid and discharge line service valves.
- 7) Allow the service valves to cool, then replace the Schrader valve cores. Attach the gauge manifold hoses.
- 8) Use an electronic leak detector or soap bubbles to check for leaks. Add a trace of refrigerant to the line set tubing through the service valve access ports (If using an electronic leak detector), and then raise the pressure using nitrogen gas (140 PSIG).
WARNING! Do not use R-404A as a mixture with pressurized air for leak testing.
- 9) After checking the line set for leaks, vent the nitrogen charge from the line set.
- 10) Evacuate the line set. Allow the vacuum pump to pull down to a 29.9" Hg vacuum. Evacuating period depends on pump capacity.
- 11) After evacuation, charge each line set tube with R-404A vapor to a pressure of 15 to 30 PSIG.
- 12) Close both gauge manifold valves.
- 13) If the line set exceeds 66' (20 m), see "II.G.4. Line Set Size and Refrigerant Charge" for proper charging of the appliance. If not, continue to step 14.
- 14) The remote condenser unit service valves.
- 15) Disconnect the gauge manifold hoses.
- 16) Replace all service valve caps and tighten.
- 17) Insulate all exposed tubing and fittings.

6. Electrical Connection

⚠ WARNING

- Electrical connection must meet national, state, and local electrical code requirements. Failure to meet these code requirements could result in death, electric shock, serious injury, fire, or damage.
- To reduce the risk of electric shock, make all remote condenser unit connections before connecting the icemaker power supply.
- **THE REMOTE CONDENSER UNIT MUST BE GROUNDED.** Install a ground wire from the icemaker fan motor junction box to the remote condenser unit junction box. Use wire of an appropriate gage and outdoor rating. Failure to properly ground the remote condenser unit could result in death or serious injury.
- Install line and neutral wires from the fan motor leads in the icemaker fan motor junction box to the leads in the remote condenser unit junction box. Use wire of an appropriate gage and outdoor rating.
- Do not connect the fan motor leads in the icemaker to incoming power source. Do not connect the fan motor leads in the icemaker together. Do not allow the leads to contact the junction box walls.
- Do not connect the remote condenser unit to an external power source.

NOTICE

On remote models, the appliance must have power for a minimum of 4 hours prior to startup to prevent compressor damage.

- Usually an electrical permit and services of a licensed electrician are required.
 - The opening for the power supply connection is 7/8" DIA to fit a 1/2" trade size conduit.
- 1) Remove the remote condenser unit louver panel. See Fig. 14.
 - 2) Remove the icemaker fan motor junction box cover. Remove the remote condenser unit junction box cover.

Fig. 14

- 3) Install a ground wire from the icemaker fan motor junction box to the remote condenser unit junction box. Use wire of an appropriate gage and outdoor rating.
- 4) Install line and neutral wires from the fan motor leads in the icemaker fan motor junction box to the leads in the remote condenser unit junction box. Use wire of an appropriate gage and outdoor rating.
- 5) Replace the junction box covers and the louver panel in their correct positions.

7. Stacking Remote Condenser Unit

- 1) Install the lower remote condenser unit as described earlier in this section.
- 2) Place the upper remote condenser unit on top of the lower remote condenser unit. See Fig. 15.
- 3) Secure the upper remote condenser unit to the lower remote condenser unit with the 4 screws provided.
- 4) Install refrigerant lines and make electrical connection as described earlier in this section.

Fig. 15

H. Final Checklist

1. Pre-Startup

- 1) Is the icemaker level?
- 2) Is the icemaker in a site where the ambient temperature is within 45°F to 100°F (7°C to 38°C) and the water temperature within 45°F to 90°F (7°C to 32°C) all year around?
- 3) All models except KM-1601SAJ/3: Is there at least 6" (15 cm) clearance at rear, sides, and top of the icemaker? KM-1601SAJ/3: Is there at least 9" (23 cm) clearance at rear, sides, and top of the icemaker?
- 4) Have the shipping carton, tape, and packing material been removed from the appliance? Is the cube guide in the correct position? Are the separators between the evaporator banks properly attached to their holding clips?
- 5) Have all electrical and water connections been made? Do electrical and water connections meet applicable national, state, and local code and regulation requirements?
- 6) Has the power supply voltage been checked or tested against the nameplate rating? Has a proper ground been installed to the icemaker?
- 7) Has the mechanical bin control been properly installed? If installed in a stack application, has the bin control wire harness been correctly installed?
- 8) On single phase KM-1301S_J models and on all three phase models, has the main transformer's voltage tap switch been positioned to match incoming voltage?
- 9) Are the water supply and drain lines sized as specified? Are the water supply line shut-off valve(s) and drain valve(s) installed? Has the water supply pressure been checked to ensure a minimum of 10 PSIG and a maximum of 113 PSIG?
- 10) Is the compressor snug on all mounting pads? Have the refrigerant lines been checked to make sure they do not rub or touch other lines or surfaces? Have the fan blades (if applicable) been checked to make sure they turn freely?
- 11) On remote models, has a proper ground also been installed to the remote condenser unit?
- 12) On remote models:
 - Is the line set sized as specified, insulated, tightened, and free of leaks and kinks?
 - If the line set exceeds 66' (20 m), has the charge been adjusted as specified?
 - Has the appliance power supply been on for a minimum of 4 hours?
 - Is the remote condenser unit in a site where the ambient temperature is within -20°F to +122°F (-29°C to +50°C) all year around?
 - Is there at least 24" (61 cm) clearance around the remote condenser unit?

2. Post-Startup

⚠ WARNING

CHOKING HAZARD: Ensure all components, fasteners, and thumbscrews are securely in place after installation. Make sure that none have fallen into the dispenser unit/ice storage bin.

- 1) Has the bin control operation been confirmed? In stacked applications, confirm both the lower and upper icemaker shuts off.
- 2) Are all components, fasteners, and thumbscrews securely in place?
- 3) Has the end user been given the instruction manual, and instructed on how to operate the appliance and the importance of the recommended periodic maintenance?
- 4) Has the end user been given the contact information of an authorized service agent?
- 5) Has the warranty registration been completed and submitted to the factory?

I. Startup

⚠ WARNING

- All parts are factory-adjusted. Improper adjustments may adversely affect safety, performance, component life, and warranty coverage.
- Make sure the icemaker has been installed as outlined in this manual and that the water supply is on.
- Improper adjustment may adversely affect safety, performance, component life, and warranty coverage.

NOTICE

- If the icemaker is turned off, wait for at least 3 minutes before restarting the icemaker to prevent damage to the compressor.
- To prevent damage to the water pump seal, do not leave the control switch in the "PUMP" position for extended periods when the water tank is empty.
- At startup, confirm that all internal and external connections are free of leaks.

Additional Notice for Remote Models

- The icemaker must have power for a minimum of 4 hours prior to startup to prevent compressor damage.

- 1) If not already removed, remove the front panel, then open the water supply line shut-off valve(s).
- 2) Move the control switch on the control box to the "ICE" position.
- 3) Replace the front panel in its correct position.
- 4) Turn on the power supply, and allow the icemaker to operate for a total of 10 minutes.
- 5) Turn off the power supply, then remove the front panel.
- 6) Remove the insulation panel. Remove the drain plug located on the lower front part of the ice chute. See Fig. 16. Allow the water tank to drain.

Fig. 16

- 7) Replace the drain plug, insulation panel, and front panel in their correct positions. Be careful not to cross thread the drain plug.

- 8) Clean the dispenser unit/ice storage bin liner using a neutral cleaner. Rinse thoroughly after cleaning.
- 9) Turn on the power supply to start the automatic icemaking process.
- 10) During the first 5 minutes of the freeze cycle, confirm bin control operation by pressing and holding the bin control's actuator paddle until the icemaker shuts down. The icemaker should shut down in approximately 15 seconds.
- 11) On water-cooled models, confirm proper condenser drain outlet/return outlet temperature as outlined in "II.F.2. Water-Cooled Condenser."
- 12) Return to "II.H.2. Post-Startup" and complete final checklist.

III. Maintenance

The appliance must be maintained in accordance with the instruction manual and labels provided. Consult with your local Hoshizaki Certified Service Representative about maintenance service.

WARNING

- Only qualified service technicians should service the appliance.
- To reduce the risk of electric shock, do not touch the control switch with damp hands.
- Move the control switch to the "OFF" position and turn off the power supply before servicing. Lockout/Tagout to prevent the power supply from being turned back on inadvertently.
- **CHOKING HAZARD:** Ensure all components, fasteners, and thumbscrews are securely in place after any maintenance is done to the appliance. Make sure that none have fallen into the dispenser unit/ice storage bin.

A. Maintenance Schedule

The maintenance schedule below is a guideline. More frequent maintenance may be required depending on water quality, the appliance's environment, and local sanitation regulations.

Maintenance Schedule		
Frequency	Area	Task
Daily	Scoop	Clean the ice scoop using a neutral cleaner. Rinse thoroughly after cleaning.
Bi-Weekly	Air Filters	Inspect. Wash with warm water and neutral cleaner if dirty.
Monthly	External Water Filters	Check for proper pressure and change if necessary.
	Icemaker Exterior	Wipe down with a clean, soft cloth. Use a damp cloth containing a neutral cleaner to wipe off oil or dirt build up. Clean any chlorine staining (rust colored spots) using a non-abrasive cleanser.
	Underside of Icemaker and Top Kits; Bin Door and Snout	Wipe down with a clean cloth and warm water.
Yearly	Icemaker and Dispenser Unit/Ice Storage Bin	Clean and sanitize per the cleaning and sanitizing instructions provided in this manual. See "III.B. Cleaning and Sanitizing Instructions."
	Water Supply Inlet	Close the icemaker water supply line shut-off valve and drain the water system. Clean the water supply inlet screen.
	Condenser	Inspect. Clean if necessary by using a brush or vacuum cleaner. More frequent cleaning may be required depending on location.
	Water Hoses	Inspect the water hoses and clean/replace if necessary.

B. Cleaning and Sanitizing Instructions

The icemaker must be cleaned and sanitized at least once a year. More frequent cleaning and sanitizing may be required in some water conditions.

WARNING

- To prevent injury to individuals and damage to the icemaker, do not use ammonia type cleaners.
- Carefully follow any instructions provided with the bottles of cleaning and sanitizing solution.
- Always wear liquid-proof gloves and goggles to prevent the cleaning and sanitizing solutions from coming into contact with skin or eyes.
- Do not leave the icemaker unattended when panels are off.

NOTICE

To prevent damage to the water pump seal, do not leave the control switch in the "PUMP" position for extended periods when the water tank is empty.

Preparation

- 1) Remove the front panel, then move the control switch to the "OFF" position. Make sure the mode switch is in the "ICE" position. After 3 minutes, move the control switch to the "ON" position and replace the front panel.
- 2) Allow the appliance to run until the compressor energizes. Once the compressor energizes, allow the appliance to run for an additional 3 minutes, then remove the front panel. Move the control switch to the "OFF" position.
- 3) Remove all ice from the dispenser unit/ice storage bin. **WARNING! If on a dispenser unit, turn off the dispenser unit power supply after dispensing the ice.**

Cleaning

- 4) Move the mode switch to the "CLEAN" position, then move the control switch to the "ON" position (1 short beep occurs, then 3 seconds later 1 long beep occurs). Replace the front panel. The water tank drains and then fills.
- 5) When the control board starts beeping (2 beep sequence), remove the front panel. Move the control switch to the "OFF" position.
- 6) Remove the front insulation panel, then pour Hoshizaki "Scale Away" into the water tank. See table below for amount. Replace the front insulation panel.

Model	Scale Away
KM-1601 and Smaller	32 fl. oz. (946 ml)
KM-1901 and Larger	43 fl. oz. (1,272 ml)

- 7) Move the control switch to the "ON" position (1 short beep occurs, then 3 seconds later 1 long beep occurs). Replace the front panel. To avoid excessive foaming in the water tank, there is a 1 minute delay before circulation begins. After approximately 30 minutes of circulation, the icemaker performs 3 rinse cycles.

- 8) When the control board starts beeping (5 beep sequence), remove the front panel. Move the control switch to the "OFF" position.
- 9) In bad or severe water conditions, turn off the power supply, then remove, clean (cleaning solution = 5 oz. Hoshizaki "Scale Away" per gallon of warm water), rinse, and replace the cube guide, float switch, water supply tubes, spray tubes, and spray guides; turn on the power supply when complete. Otherwise, continue to step 10.

Sanitizing

- 10) Confirm the mode switch is in the "CLEAN" position, then move the control switch to the "ON" position (1 short beep occurs, then 3 seconds later 1 long beep occurs). Replace the front panel. Pump motor and drain valve energize for 45 seconds (no water in the water tank and PM and DV LEDs are on). After the pump motor and drain valve de-energize, fill cycle starts (WV LED turns on).
- 11) When the control board starts beeping (2 beep sequence), remove the front panel. Move the control switch to the "OFF" position.
- 12) Remove the front insulation panel, then pour 7.5% sodium hypochlorite solution (chlorine bleach) into the water tank. See the table below for amount. Replace the front insulation panel.
IMPORTANT! Use regular bleach with no additives. Using a bleach with additives causes excessive foaming during sanitizing, reducing the effectiveness of sanitizing.

Model	7.5% Sodium Hypochlorite Solution (Chlorine Bleach)
KM-1601 and Smaller	2.05 fl. oz. (61 ml)
KM-1901 and Larger	2.73 fl. oz. (81 ml)

- 13) Move the control switch to the "ON" position (1 short beep occurs, then 3 seconds later 1 long beep occurs). Replace the front panel. To avoid excessive foaming in the water tank, there is a 1 minute delay before circulation begins. After approximately 30 minutes of circulation, the icemaker performs 3 rinse cycles.
- 14) When the control board starts beeping (5 beep sequence), remove the front panel. Move the control switch to the "OFF" position.
- 15) Clean the dispenser unit/ice storage bin liner using a neutral cleaner. Rinse thoroughly after cleaning.
- 16) Move the mode switch to the "ICE" position, then move the control switch to the "ON" position. Note: If on a dispenser unit, turn on the dispenser unit power supply.
- 17) Replace all panels in their correct positions.

IV. Preparing the Appliance for Periods of Non-Use

NOTICE
• When storing the appliance for an extended time or in sub-freezing temperatures, follow the instructions below to prevent damage. • To prevent damage to the water pump seal, do not leave the control switch in the "PUMP" position for extended periods when the water tank is empty.

When the icemaker is not used for two or three days under normal conditions, it is sufficient to move the control switch to the "OFF" position. When storing the icemaker for an extended time or in sub-freezing temperatures, follow the instructions below.

1. Remove the water from the appliance water supply line:

- 1) Turn off the power supply, then remove the front panel.
- 2) Move the control switch to the "OFF" position.
- 3) Close the icemaker water supply line shut-off valve, then open the icemaker water supply line drain valve.
- 4) Allow the line to drain by gravity.
- 5) Attach a compressed air or carbon dioxide supply to the icemaker water supply line drain valve.
- 6) Move the control switch to the "ICE" position.
- 7) Replace the front panel in its correct position, then turn on the power supply.
- 8) Blow the icemaker water supply line out using the compressed air or carbon dioxide supply.
- 9) Close the icemaker water supply line drain valve.

2. Drain the water tank:

- 1) Turn off the power supply, then remove the front panel.
- 2) Move the control switch to the "OFF" position.
- 3) Remove the insulation panel. Remove the drain plug located on the lower front part of the ice chute. See Fig. 16. Allow the water tank to drain.
- 4) Replace the drain plug and the insulation panel in their correct positions. Be careful not to cross thread the drain plug.
- 5) Remove all ice from the dispenser unit/ice storage bin. Clean the dispenser unit/ice storage bin liner using a neutral cleaner. Rinse thoroughly after cleaning.
- 6) Replace the front panel in its correct position.

3. On water-cooled models, remove the water from the water-cooled condenser:

- 1) Make sure the power supply is off, then remove the front, top, and right side panels.
- 2) Close the condenser water supply line shut-off valve. If connected to a closed loop system, also close the condenser return line shut-off valve.
- 3) Open the condenser water supply line drain valve. If connected to a closed loop system, also open the condenser return line drain valve.
- 4) Attach a compressed air or carbon dioxide supply to the condenser water supply line drain valve.
- 5) Open the water regulating valve by using a screwdriver to pry up on the spring retainer underneath the spring. While holding the valve open, blow out the condenser using the compressed air or carbon dioxide supply until water stops coming out.
- 6) Close the drain valve(s).
- 7) Replace the right side panel, top panel, and front panel in their correct positions.

V. Disposal

The appliance contains refrigerant and must be disposed of in accordance with applicable national, state, and local codes and regulations. Refrigerant must be recovered by properly certified service personnel.
