Like all James SoundBars, each SLT bar comes completely customized for your TV/display. The term "slot" refers to the unique design of the SLT series. To minimize the height to 3.15-inch, the powerful 3.5-inch woofers are moved to the inside of the bar and fire out a slot on the front baffle. A 2-inch midrange and 0.75-inch tweeter are also located on the front baffle to complete the system. The result is a narrow bar with excellent low frequency response, down to 80 Hz.

This completely customizable speaker bar is the perfect solution for any variety of applications and delivers the crisp, high-quality sound that your entertainment system has been missing. These bars are constructed of aircraft grade aluminum and feature our ultra-slim aluminum cone woofers and silk dome tweeters, these bars can be placed just about anywhere.

Complete with custom brackets to mount the bar or bars to your display, these incredible speaker bars integrate elegantly and seamlessly into any entertainment system. The SLT3 series SoundBars are innovative specialty solutions, which provide James renowned performance for unique space applications.

Custom finishes and marine options available. Driver configurations may be dependent on the overall width of the bar.
