Installation Steps

1. Remove wood brace on front of pallet.

Warning: Failure to remove wood brace may cause damage to the glass door.

2. Open door completely and rotate door hinge mechanism as much as possible.

3. Raise the door about 20 – 30 degrees and rotate the hinge mechanism until you hear a click. This indicates the lock is fully unlocked and will hold the hinge when closed. Failure to do this will cause the hinge to continue to close while you are trying to remove the door.

4. Continue to close the door gently until it is stopped by the hinge mechanism, releasing the tension on the door hinges. If the door hinges fail to stop, repeat step 3.

DO NOT TRY TO FORCE THE DOOR CLOSED

5. Firmly grasp both sides of the door near the bottom by the hinges. Evenly pull up on both sides. Lay removed door flat on a towel to prevent scratches. Repeat for all doors.

- Do not hold the door by the handle or use the handle for leverage. It may cause the glass to break.

- Do not set the door down on the glass's edge. It may cause the tempered glass to shatter.

6. Remove oven racks and drip tray taped to top of wall oven.

7. Ensure the wall power is turned off. Wire the wall oven to the wall power.

NOTE: Check local codes to see which wiring option should be used when grounding the unit.

8. Unscrew the pallet bracket from the pallet. Slide the bracket out of the side of the oven. Repeat for the other side.

9. Lift oven into position.
Take care how the power conduit is routed as there may be minimal space behind the oven.

10. Push oven straight into cabinetry cutout.

11. Ensure that the control panel glass is flush with the face of the cabinetry.

12. Screw oven into cabinetry using the provided screws.
Note: Four screws for single ovens, 8 screws for double ovens.

13. Return the racks to the oven.

14. Replace the oven door and press firmly to insure it seats completely down on the hinge locking mechanism.

Do not hold the door by the handle or use the handle for leverage. It may cause the glass to break.

15. Open the door completely. Rotate door hinge locking mechanism back into place so that it latches fully. If it will not latch fully, close the door about 60 degrees and press down on the top corner, of the side that isn't locking, to get the door to seat fully on the locking mechanism and repeat.

16. Install drip tray below the oven cavity and close the door. Repeat for all other doors.

Final Install Checklist

Read all installation instructions in this manual to see if the unit has been correctly installed before use.

Ensure that:

- The oven is level and securely fitted to the cabinetry.
- Any internal packaging has been removed from the appliance.
- The disconnect switch is accessible by the customer.
- The bottom shelf can fully support the total weight of the combined appliances.
- The power is turned on at the breaker.

Test Operations:

NOTE: Heating elements and convection fan will not operate with the door open.

- Tap the screen to wake the appliance.
- Check Bake Function** — Select the Bake function and select Start. Visually check to see that Broil elements glow. Carefully check if heat can be felt radiating from the Bake elements.
- Check High Broil Function** — Select the Broil cooking function, select High, and select Start. Visually check that both the inner and perimeter Broil elements are set at full power and glow consistently. Set broil element to full power. Check that oven cavity reaches temperature. (The Convection Broil function is the same as High Broil, but with the convection fan turned on.)

Convection Functions:

- Check Convection Bake & Broil Functions** — Follow the same procedure as above with the Bake and Broil functions. Verify that the elements heat up and the convection fan turns on.
- Check TruConvec™ Function** — Set TruConvec™ function to full power. Visually check that the element behind the convection fan cover glows and the convection fan turns on.
- Check Convection Roast Function** — Select the Convection Roast function and select Start. Visually check that the Bake and Broil elements and the element behind the convection fan cover heat up and/or glow and the convection fan turns on.

Connections:

- Check Meat Probe Connection** — Plug in the Meat Probe. Visually make sure that the Meat Probe icon shows up at the top of the display. Set a Bake Function, and make sure that the Meat Probe temperature monitoring options show up.
- Check Wi-Fi Connection** — Access the Settings menu and visually check to see if the name of the Wi-Fi router for the residence displays.
- Check Phone App Connection** — Access the Settings menu and connect your phone to the App. Ensure that the app displays correct and updated information when the above tests are taking place.
