CUTOUT DIMENSIONS – FLUSH AND PROUD INSTALLATION

INSTALLATION CLEARANCES – FLUSH INSTALLATION

TOP VIEW

Notes

Door Swing Clearances – The installation must allow for clearances to adjacent walls or cabinets. This refrigerator is equipped with a 2-position door stop. The factory-set 115° door swing can be adjusted to 90° if clearance to adjacent cabinets or walls is restricted.

Door Handle Clearances – The pre-assembled unit uses a Stainless Steel Door Panel Kit w/Handles with the Brushed Aluminum Handles. The door handle clearance with door open 115° is 12 15/16" (329 mm).

Notes

Proud or Flush Installation

Refrigerator installs proud in a 24" deep cutout. The pre-assembled panel protrudes with 3/4".

With a 25" (635 mm) cutout depth, the front face of the refrigerator fits flush with 25" (635 mm) depth adjacent cabinets.

Electrical

A 115V, 60Hz., 15 amp power supply is required. An individual properly grounded branch circuit or circuit breaker is recommended. Install a properly grounded 3-prong electrical receptacle recessed into the back wall. Electrical must be located on rear wall as shown.

Note: GFI (ground fault interrupter) is not recommended.

Water Line

A cold water supply is required for automatic icemaker operation. Water pressure must be between 20 and 120 p.s.i.

Tubing should be long enough to extend to the front of the refrigerator. Allow enough tubing to accommodate a bend leading into the water line connection.

Water line can enter an opening through floor or back wall.

Install a shut-off valve between the icemaker water valve and cold water supply in the home.
