Unlike anything you have seen or heard, James Loudspeaker has raised industry standards once again. The James seamless Small Aperture in-ceiling/in-wall speakers have a very small 3" round or 3"x 3" square sound aperture yet pack in a full 3-way system for deep bass and wide frequency response. A seamless edge detail keeps them looking smart and modern yet discrete. The system includes a mini PowerPipe 6.5" subwoofer, 2" midrange and 3/4" dome tweeter for wide 40Hz to 22kHz response. Having a real subwoofer also allows the system to play at loud levels. Deep bass and high SPL from such a small visible opening causes a second take!

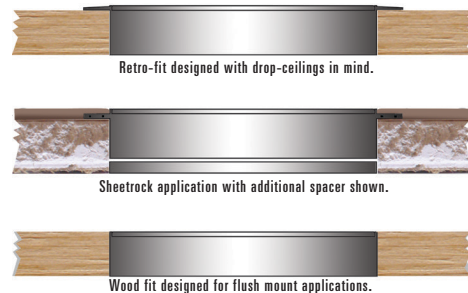

All aircraft grade aluminum construction and a modular design provide long life and easy service, while installer configurable protection offers the utmost reliability. The 63SA-4 has a larger foot print than other SA models but is less than 4" deep and best suited for an in-wall or shallow-ceiling application. The SA series is designed to also accept industry standard lighting trim kits to allow integration with similar styled lighting products.

Order woofer assembly, mid-range module and grille kits separately.
