Jamo Outdoor – open air concerts every day

Permanently exposed to testing conditions, life as an outdoor speaker can be tough. That's why we've designed our series of 2-way bass reflex indoor/outdoor speakers to endure rigors of the great outdoors, year after year.

Designed to suit both commercial and residential installations the series features an easy-to-adjust mounting arrangement that makes it particularly popular in retail outlets. In residential applications, the speakers are ideal for placement on the patio, in the garden or by the pool. The designs are elegant, without being attention grabbing, while the sound quality is truly exceptional.

The largest model, I/O 8A2, is fitted with a powerful 203mm/8in woofer for a strong bass response, reaching down to an impressive 50Hz. The two mid-sized indoor/outdoor models, I/O 3A2 and I/O 3S, both sport a 133mm/5½in polypropylene driver instead of the 203mm/8in unit used in the I/O 8A2, resulting in a smaller overall package. I/O 3S is able to reproduce stereo sound from just one speaker. The I/O 1A2, the smallest model in our range, features a 114mm/4½in woofer, an ideal choice if you want an inconspicuous source of sound.

All models feature aluminum grills.

Type	I/O 8A2	I/O 3A2	I/O 3S	I/O 1A2
